# Team UV Series

## Double up with the Ultra Violet Team by Pacesetter!

Pacesetter announces the ultimate duo in UV printing. Team UV consists of the perfect combination – a blanket and roller – specifically designed to provide the ultimate balance in UV printing.

### Ultra Violet Rollers.

This unique compound by Pacesetter was designed for the perfect ink and water balance with today's high speed pressroom consumables in mind. Eliminate the downtime in constantly having to reset rollers that shrink and swell. Pacesetter's UV compound also delivers a higher quality printing roller that produces great printing characteristics, reduces waste and last longer than most of today's traditional UV rollers.

Any concerns with your present chemicals? Let Pacesetter's state of the art lab test them for you!

### Ultra Violet Blankets.

With UV printers in mind, our blanket was specifically designed for quality and durability. Pacesetter's UV blanket provides great ink transfer while resisting chemical effects of liquid monomer and polymer systems used in UV inks. Low piling, great ink transfer and durability equals less waste, downtime, high quality printing and efficient pressroom manageability.
